

FOR IMMEDIATE RELEASE

Summit Announces Groundbreaking Salt Remediation Solution Kosher Innovative Salt Solution - KISS

Summit is excited to announce, alongside collaborators NASA Engineering (NASA-E), University of Cambridge (UofC), and The Budweiser Institute of Technology (TBIT), the launch of a breakthrough salt remediation solution for water and soil affected by high salinity.

This state-of-the-art technology, which efficiently eliminates high concentrations of salt and renders it reusable for commercial or chemical sectors, is the fruit of a 15-year journey. It marries Summit's extensive field expertise in managing saline soils and groundwater with groundbreaking contributions from the globe's foremost innovators, scientists, and engineers. This consortium, named the Coalition for United Saline Science (CUSS), united under the shared mission to tackle a critical worldwide challenge that significantly affects agriculture, oil and gas, and other industrial sectors.

"Our clients will see dramatic cost reductions in their salt remediation projects, and the environmental management of salt will be forever transformed. It's even effective against heavy metals, hydrocarbons, and stubborn grass stains," remarks Jeff Carratt, Summit's Vice President of Marketing and Innovative Stuff.

Proud to be the commercial driver for this advanced technology, Summit harnesses the unique combination of NASA-E's proprietary solar and wind energy techniques, UofC's leading-edge research and innovation, and the tried-and-true carbonated yeast technology developed by TBIT.

After an epic saga of tireless research, unwavering dedication, a galaxy of late nights, an ocean of pizzas, a sprinkle of divorces, a dash of legal drama, and believe it or not, a partridge in a pear tree, here we stand," proclaims UofC Scientist Zacharia VonKopec with a flourish. He adds with a wink, "Indeed, it's a cheesy masterpiece of scientific endeavor.
